Location

Hope Island, 4212

Skills

Programming

- JavaScript (vanilla + node.js + react)
- C++
- C
- MySQL
- Python
- C++ & HTML

Digital Design

- Full knowledge of the Adobe Suite
- Blender
- Figma

Software Development

- Object-Oriented Programming (OOP)
- Debugging & troubleshooting (compile-time and runtime errors)
- Basic software architecture understanding

Hardware

- Hardware troubleshooting & diagnostics
- Basic electrical wiring (automotive installs)
- System setup & configuration
- Computer Building and Repairing

Web & Backend Development

- Node.js & Express (basic API development)
- RESTful API design (GET/POST endpoints)
- Asynchronous programming (async/await)
- API testing (curl / basic tools)

Noah Pacheco

Computer Science Student

About me

I am a second-year Computer Science student with a lifelong interest in technology, creative problem-solving, and understanding how things work. My experience began with building and repairing computers before expanding into video editing, visual effects, 3D rendering, and software development. I now apply this combination of technical curiosity and creativity to building practical programming projects and exploring new technologies. I am a self-directed learner who enjoys solving unfamiliar problems, working through ambiguity, and turning ideas into functional products. Outside of technology, I am a passionate surfer and enjoy spending as much time in the ocean as possible.

Education

2021-2022

Barrington College

Diploma of Business

I completed a diploma of business while attending high school.

2024-2025

Griffith University.

Bachelor of Business (Marketing)

I completed one year of business and marketing at Griffith University.

2024-2025

freeCodeCamp

Responsive Web Design Certificate

I completed an online free course to grasp the basics of HTML and CSS.

2025 - Present

Griffith University

Bachelor of Computer Science

I am in my second year of Computer Science majoring in Algorithms and Applied Computing. During this degree and in my own time, I have learnt about databases (MySQL), gained confidence in low-level languages like C and C++ and high level languages such as Python and JavaScript. I have learnt about networking and servers and discrete mathematics, object oriented programming, algorithms etc.

2025 - Present

TheOdinProject

Full Stack Mastery (JavaScript)

I have been slowly learning to program on the full stack with TheOdinProject. I am currently learning Node.js and the backend with a future goal to be able to turn any idea into a meaningful, impactful intelligent system.

Experience

2020-2022

Wakeboarding Park

Gold Coast Wake Park - Dockhand/Lifeguard

I worked at the Gold Coast Wakepark in Oxenford as a dockhand whose role was to teach beginners how to wakeboard. I also performed many rescues and often was put on a lifeguard for the Oxenford Aqua Park too.

2022

Critical Input

Glencore Mine Stocktake Visitor (Two Week Contract)

I assisted a consultancy company to perform a stocktake in for the Glencore mine in Cobar.

Computer Science Fundamentals

- Data structures (arrays, vectors, basic collections)
- Algorithms (sorting, recursion)
- Time & space complexity (Big-O fundamentals)
- Problem-solving & algorithmic thinking

Tools and Technologies

- Git & version control
- Visual Studio Code
- Linux (Ubuntu) & Windows environments
- Command-line tools (compilation, scripting, debugging)

Language

Japanese (Conversational level)

English

Awards

May 2025 | NextGen StartupHackathon 2025
“1st Place Award”

Mar 2026 | Griffith University
“Award for Academic Excellence”

2023-2024

Fast Food Franchise

Chief Marketing Officer / Company IT

I was a part owner of a fast-food franchise company that I did all of the marketing for and created all of the systems for. Such as: the POS system, online ordering system, website, menus, billboards, flyers and social media posts.

2024 - Present

Bunnings Warehouse

Bunnings Retail (Team Member)

Although I have never worked in the tech industry, my job at Bunnings Warehouse Arundel and customer-service based jobs before this have taught me social skills and given me the ability to adapt in every situation and learn new skills on the fly.

Some of my projects...

Diamond Cipher CLI Application | C++

- Built a command-line encryption and decryption application using a custom diamond-array traversal algorithm.
- Applied object-oriented programming concepts including inheritance, polymorphism, exception handling, and file I/O.
- Implemented input validation and error handling to support reliable encryption, decryption, and message storage.

Full-Stack Surf Session Tracker | React, Node.js, Express

- Developed a full-stack application for recording and reviewing surf sessions, including dates, conditions, locations, and board selections.
- Built a REST API with Node.js and Express and connected it to a React-based user interface.
- Structured session data in JSON and designed the application to support future database and surf-forecast integrations.

Browser DJ Soundpad | JavaScript, HTML, CSS

- Created an interactive browser-based DJ soundpad inspired by techno and trance music.
- Used JavaScript classes and event handling to control layered audio samples and user interactions.
- Designed a responsive interface using custom HTML and CSS.
